

Voltage detectors / Medium-voltage detector – Power Light

POWER SALVACANE

Voltage detector
Medium voltage – Optical and acoustic

The SALVACANE is a portable voltage detector specially designed for the detection of hazardous voltages in inspection chambers, underground chambers and paved areas with metal covers, where cable insulation may deteriorate over time due to moisture, vibrations and ageing of the installation.

Thanks to its design with rolling wheels and its use in conjunction with an insulating pole, it allows the inspection of floors and hard-to-reach areas without the need to bend down or enter confined spaces, while always maintaining a safe distance.

VOLTAGE RANGES
 from 24 V to 5 kV

31003 POWER SALVACANE

Code	Ref.	Voltage ranges	Frequency
31003001	POWER SALVACANE-5	24 V - 5 kV	50 / 60 Hz

Insulating pole in accordance with Royal Decree RD 614/2001 (not included).
